BENEFITS AND DAMAGES STATEMENT

The Viewers determined that the lands affected by the drainage system are generally similar and that the following comments refer to all such tracts.

1. Existing land use, property value and economic productivity: Land is presently used for building sites, roads, and for agricultural purposes. Agricultural lands are primarily used for the production of corn and soybeans. The land has good economic productivity when properly drained.
2. Potential land use, property value and economic productivity from the drainage system: The drainage system has been in existence for many years and provides drainage for agricultural purposes. Land affected by the drainage system has potential to produce above average yields.
3. The benefits or damages from the drainage system: Damages were awarded in the previous proceedings for the established open ditches. We have awarded damages for additional ditch right of way. Due to M.S. 103E.021, a one-rod wide grass strip on each side of the ditch must be planted with permanent vegetation. Therefore, a change of circumstances exists which requires award of damages to provide for such grass strip. Damages from the drainage system are related to the fair market value of the property required for the permanent grass strip under 103E.021 and additional right of way. Benefits derived by lands affected by the drainage system are due to (A) Improved capacity to remove surface waters due to previous construction and maintenance of the open ditch, which results in an increase in the current market value of property, or (B) an increase in the potential for agricultural production as a result of the previous construction and continued maintenance of the drainage system.

RECOMMENDATIONS

We, the Viewers appointed to view the property, recommend that the benefits, as redetermined, and the damages for grass strip and additional right of way, be adopted.
